Chapter 1: General Introduction	
<i>Péricles GASPARINI ALVES</i>	1
I. The Role of CSBMs in Outer Space and Related Activities	2
II. Strengthening the Legal Regime of Outer Space and Related Activities	4
III. CSBMs and Earth-to-Space Monitoring: Proposals	6
IV. CSBMs in Outer Space: Political Implications	12
V. Earth-to-Space Monitoring Technologies: The Limits of the Possible	14
1. Objects in Outer Space: A Stock-Taking	14
2. Monitoring Artificial Satellites	16
3. Radio Emission/Reception Operations	18
4. Laser Systems	19
5. Optical Systems	21
6. Radar/Interferometry	24
VI. Is a CSBMs Earth-to-Space Monitoring Network Feasible?	25

))

- 1. Discussions in the Committee on the Peaceful Uses
of Outer Space 52
- 2. Discussions in the Conference on Disarmament 54

- VI. International Co-operation in Space Tracking 55

- VII. Conclusions 56

Chapter 4: CSBMs and Earth-to-Space Tracking:
A General Overview of Existing Proposals

- Laurence BEAU* 59

- I. Introduction 59

- II. Confidence-Building Measures and the Aim of Transparency 60

 - 1. Exchange of Information 61
 - 2. Notification of Launches 61
 - 3. Strengthening the Convention on Registration 62
 - 4. Inspections 62

- III. The Introduction of a "Space Code of Conduct" 63

 - 1. The Problem of Anti-Satellite Weapons 63
 - 2. The Principle of Satellite Immunity 64
 - 3. Rules of Behaviour in Space 65

 - a. The Aim 65
 - b. Precise Rules 65
 - c. The Advantages and Drawbacks
of Space "Rules of the Road" 66

- IV. Institutional Confidence-Building Measures 66

 - 1. The Main Proposals Regarding Multilateral Organizations
Linked to Space 67

 - a. The International Satellite Monitoring Agency
(ISMA) - 1978 67
 - b. The Canadian PAXSAT Concept - 1987 67
 - c. The Satellite Image Processing Agency (SIPA) - 1988 68
 - d. The World Space Organization (WSO) - 1988 68
 - e. The Regional Transparency Agencies - 1991 69

))

- 2. The International Trajectory Centre (UNITRACE) Concept - 1989 69
- 3. The International Launch Notification Centre (ILNC) - 1993 71

V. Conclusions 71

Chapter 5: CSBMs in Outer Space: Some Political Considerations

Edmundo Sussumu FUJITA 73

- I. The Evolving Political Context: A New Approach to Collective Security 73
- II. Interests and Capabilities of States in Outer Space Activities 76
- III. Confidence-Building Measures in Outer Space: Related Initiatives at the Disarmament Commission and COPUOS 78
 - 1. Transfer of High Technology with Military Applications 79
 - 2. Space Benefits 84
- IV. Conclusion: The Emerging New Framework for Collective Security in Outer Space in the Post-Cold War Era 87
 - 1. International Co-operation in CSBMs: Earth-to-Space Tracking 87
 - 2. The Problem of Space Debris 88
 - 3. CSBM and Technology Sharing: A Future Oriented Agenda 89

Chapter 6: Artificial Satellites and Space Debris: Current Stocks, Orbital Distribution and Monitoring Activities

Paolo FARINELLA 91

- I. Introduction 91
- II. Current Population 91
- III. Orbital Distributions 96
 - 1. Low Orbits 98
 - 2. Intermediate Orbits 99
 - 3. High Orbits 99
- IV. Demography of Orbiting Objects 100

))

- V. Monitoring Outer Space Activities 106
 - 1. Basic Principles 106
 - 2. Military-operated Monitoring 109
 - 3. Civilian-operated Monitoring 111
- VI. Conclusions 114

- Chapter 7: Rocket Launches: Current Trends, Growth Prospects,
and Monitoring Operations**
Péricles GASPARINI ALVES 115
- I. Rocket Launches Record 115
 - 1. Space Launchers 115
 - 2. Sounding Rockets 120
 - 3. Ballistic Missiles 121
- II. Monitoring Rocket Launches 124
 - 1. Space Launches and Sounding Rockets 126
 - 2. Ballistic Missiles 128
- III. Conclusions 135

- Chapter 8: Command and Control of Artificial Satellites:
Implications for Monitoring**
Fernand ALBY 137
- I. Introduction 137
- II. Classical Orbit Control 139
 - 1. Tracking Measurements 140
 - a. Low-Earth Orbit 140
 - b. Geostationary Orbit 141
 - 2. Orbit Determination 141
 - 3. Orbit Prediction 142
 - 4. Manoeuvres Computation 143

))

a.	Constraints	143
b.	Natural Evolution and Manoeuvres	143
c.	Sequence of Operations	144
5.	Visibility Prediction and Pointing Elements	145
III.	Particular Cases	145
1.	Collocations	146
2.	Natural Re-entry	147
3.	Satellite Autonomy	149
IV.	Conclusions	149

Chapter 9: Radio Tracking and Monitoring:

Implications for CSBMs

	<i>Péricles</i> GASPARINI ALVES and <i>Fernand</i> ALBY	151
I.	Introduction	151
II.	Signal Operations: Basic Principles	152
1.	Satellite Signals	152
a.	Operations and Functions	152
i.	Tracking Operations	154
ii.	Telemetry Operations	154
iii.	Telecommand Operations	155
b.	Major Radiofrequency Sub-Systems	155
i.	Earth-Station Antennas	155
ii.	Satellite-Mounted Antennas	162
iii.	Beacon	164
iv.	Software Interface	168
2.	Rocket Flight Signals	171
a.	Space Launchers/Sounding Rockets	172
b.	Ballistic Missiles	172
III.	Signal Emission/Reception and CSBMs	179

))

1. Keep-out Zones, Trajectory Centre,
and Satellite Immunity Agreements 182
2. Rocket Launch Notification Agreement 185

IV. Conclusions 187

Chapter 10: Laser Systems for Optical Space Observation

Janet S. FENDER 189

I. Introduction 189

II. Active Tracking 191

1. Performance Requirements 192

2. Technology Characteristics and Status 193

a. Acquisition Sub-Systems 193

b. Laser Illuminators 194

c. Pointing Gimbals and Telescope 195

d. Active Track Sensor 195

e. Track Processor 196

f. Track Algorithms 196

g. Point Ahead Mirror and Control System 199

3. Active Track Systems for CSBMs 199

III. CO2 Laser Radar 200

1. Performance Parameters 202

2. Technology Characteristics and Status 203

a. CO2 Laser Illuminator 203

b. Heterodyne Receiver Technology 203

c. Image Reconstruction 203

3. CO2 Laser Radar Systems for CSBMs 203

IV. Advanced Imaging Technologies 204

1. Active Imaging Systems 204

2. System Operation 205

3. Performance Parameters 206

))

- 4. Technology Characteristics and Status 207
- 5. Active Imaging Systems for CSBMs 208

- V. Laser Guide star 208
 - 1. Performance Parameters 211
 - 2. Technology Characteristics and Status 212
 - 3. Laser Guide star Systems for CSBMs 213
- VI. Conclusions 215

Chapter 11: Optical Earth-to-Space Observations of Artificial Satellites and Space Debris: Monitoring CSBMs

Alexandr V. BAGROV 217

- I. Natural Limitations for Optical Observations 217
- II. Real Probabilities of Optical Earth-to-Space Observations for Detection of Unknown Objects 218
- III. Photometric Observations for Remote Observation of Individual Satellites: Theory 221
- IV. Photometric Observations of Artificial Satellites: An Example of the Verification of Their Activity 224
- V. Present Status of Photometric Equipment for Earth-to-Space Observations with Astronomical Telescope 230
 - 1. Electrophotometers with Photomultiplier Tubes 230
 - 2. Slitless Afocal Spectrograph (SAS) for TV Camera 232
 - 3. TV-polarimeter 236
- VI. Conclusions 237

Chapter 12: The Application of the Technique of Radar/Interferometry to CSBMs in Outer Space

Wayne H. CANNON 239

- I. Introduction 239

))

- II. The Scope of the Problem 239
 - 1. Space-Based Technologies 239
 - 2. Ground-Based Technologies 240
 - a. Phase Adaptive Optical Telescopes 240
 - b. Radar Systems 241
 - 3. Doppler/Range Imaging Radar Systems 242
 - 4. Synthetic Aperture Radar (SAR) Imaging Systems 244
 - 5. Radar/Interferometry Imaging Systems 245
- III. Imaging Orbiting Objects with Radar/Interferometry Systems 246
 - 1. Image Quality and the Number of Measured Fourier Coefficients . . . 246
 - 2. Signal-To-Noise Ratio Considerations 248
 - 3. Angular Resolution of a Radar/Interferometry Imaging System 252
 - a. Closure Phase and the Effects of Curvature of Wavefront 254
 - b. Imaging a Target at 150 km Altitude 255
 - c. Imaging a Target at 1,000 km Altitude 255
 - d. Imaging a Target at 40,000 km Altitude 256
 - e. The Need for Multiple Array Configurations 256
 - f. Very Long Baseline Interferometry or
Connected Element Interferometry 257
 - 4. Advantages of Radar/Interferometry Imaging Systems 258
 - 5. Disadvantages of Radar/Interferometry Imaging Systems 259
- IV. Conclusions 261

Chapter 13: Applying CSBMs to the Outer Space Environment

- Péricles GASPARINI ALVES* 263
 - I. Introduction 263
 - II. Rationale 264
 - III. Functions 266
 - 1. Transparency and Constraints 266
 - 2. The Building Blocs 267
 - 3. Guidelines 269

))))))))))

- IV. Elements 271
 - 1. Notification 272
 - a. Artificial Satellites 272
 - b. Rocket Launches 275
 - 2. Rules of the Road 277
 - 3. Verification 279
- V. Scope 280
 - 1. Universal Participation 281
 - 2. Protection of the Space Environment 282
 - 3. Technology Transfer and Training Opportunities 283
- VI. Conclusions 284

Chapter 14: Monitoring Scenarios for Different CSBMs in Outer Space
Péricles GASPARINI ALVES 285

- I. Monitoring Space Objects 285
 - 1. Optical and Radar Systems 288
 - a. Announced Activities. 289
 - b. Non-Announced Activities 290
 - c. Selected Activities 291
 - d. Examples of Tailor-Made Monitoring Equipment 292
 - 2. Radio Systems 297
- II. Monitoring Rocket Launches 301
- III. Conclusions 305

Chapter 15: Establishing an Earth-to-Space Monitoring Network for CSBMs
Péricles GASPARINI ALVES 307

- I. Basic Notification Requirements 308

))

II. Monitoring Objectives 311

III. Minimum Operational Requirements 313

IV. Development Phases 315

V. Financial Considerations 316

VI. Political/Diplomatic Initiatives 319

General Conclusions

Péricles GASPARINI ALVES 323

I. Broadening and Intensifying the Debate 323

II. Identifying Solutions to Present and Prospective Problems 325

III. Proposing a Plan of Action 327
